

SBR Draft

National Register of Historic Places Registration Form

1. Name of Property

Historic Name: Roberts Clinic

Other name/site number: NA

Name of related multiple property listing: NA

2. Location

Street & number: 1174 San Bernard Street

City or town: Austin

State: Texas

County: Travis

Not for publication: ☐Vicinity: ☐

3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act, as amended, I hereby certify that this
(☒ nomination ☐ request for determination of eligibility) meets the documentation standards for registering properties in the
National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60. In my
opinion, the property (☒ meets ☐ does not meet) the National Register criteria.

I recommend that this property be considered significant at the following levels of significance:

☐ national ☐ statewide ☐ localApplicable National Register Criteria: ☐ A ☐ B ☐ C ☐ D_____
Signature of certifying official / Title

State Historic Preservation Officer

Date

Texas Historical Commission

State or Federal agency / bureau or Tribal GovernmentIn my opinion, the property ☒ meets ☐ does not meet the National Register criteria._____
Signature of commenting or other official_____
Date_____
State or Federal agency / bureau or Tribal Government

4. National Park Service Certification

I hereby certify that the property is:

____ entered in the National Register

____ determined eligible for the National Register

____ determined not eligible for the National Register.

____ removed from the National Register

____ other, explain: _____

Signature of the Keeper_____
Date of Action

Roberts Clinic, Austin, Travis County, Texas

5. Classification

Ownership of Property

<input checked="" type="checkbox"/>	Private
<input type="checkbox"/>	Public - Local
<input type="checkbox"/>	Public - State
<input type="checkbox"/>	Public - Federal

Category of Property

<input checked="" type="checkbox"/>	building(s)
<input type="checkbox"/>	district
<input type="checkbox"/>	site
<input type="checkbox"/>	structure
<input type="checkbox"/>	object

Number of Resources within Property

Contributing	Noncontributing	
1	2	buildings
0	0	sites
0	0	structures
0	0	objects
1	2	total

Number of contributing resources previously listed in the National Register: NA

6. Function or Use

Historic Functions: Healthcare: clinic, Domestic: single dwelling

Current Functions: Domestic: single dwelling

7. Description

Architectural Classification: Late 19TH and 20TH Century Revivals: Colonial Revival

Principal Exterior Materials: Brick, stucco, wood

Narrative Description (see continuation sheets 7-6 through 7-10)

Roberts Clinic, Austin, Travis County, Texas

8. Statement of Significance

Applicable National Register Criteria

<input checked="" type="checkbox"/>	A	Property is associated with events that have made a significant contribution to the broad patterns of our history.
<input type="checkbox"/>	B	Property is associated with the lives of persons significant in our past.
<input checked="" type="checkbox"/>	C	Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
<input type="checkbox"/>	D	Property has yielded, or is likely to yield information important in prehistory or history.

Criteria Considerations: NA

Areas of Significance: Ethnic Heritage: Black, Health/Medicine; Architecture

Period of Significance: 1937-1964

Significant Dates: 1937

Significant Person (only if criterion b is marked): NA

Cultural Affiliation (only if criterion d is marked): NA

Architect/Builder: Bingham, John R.(builder)

Narrative Statement of Significance (see continuation sheets 8-11 through 8-22)

9. Major Bibliographic References

Bibliography (see continuation sheet 9-23 through 9-24)

Previous documentation on file (NPS):

- ☐ preliminary determination of individual listing (36 CFR 67) has been requested.
- ☐ previously listed in the National Register
- ☐ previously determined eligible by the National Register
- ☐ designated a National Historic Landmark
- ☐ recorded by Historic American Buildings Survey #
- ☐ recorded by Historic American Engineering Record #

Primary location of additional data:

- ☒ State historic preservation office (*Texas Historical Commission, Austin*)
- ☐ Other state agency
- ☐ Federal agency
- ☒ Local government: City of Austin, Historic Preservation Office
- ☐ University
- ☒ Other -- Specify Repository: Austin History Center

Historic Resources Survey Number (if assigned): NA

Roberts Clinic, Austin, Travis County, Texas

10. Geographical Data

Acreage of Property: Less than 1 acre

Coordinates

Latitude/Longitude Coordinates

Datum if other than WGS84: NA

1. Latitude: 30.270794°N Longitude: -97.726372°W

Verbal Boundary Description: 107 X 175 FT OF LOT 3 BLK 6 OLT 56 DIV B ROBERTSON GEO L SUBD (Travis Central Appraisal District) as shown on attached map.

Boundary Justification: The boundary contains all property historically associated with the nominated resource.

11. Form Prepared By

Name/title: Bonnie Tipton Wilson (Historian, Texas Historical Commission) and Terri Asendorf Ruiz
(Student, University of Texas, 2004)

Organization: Texas Historical Commission

Street & number: P.O. Box 12276

City or Town: Austin State: TX Zip Code: 78711

Email: bonnie.wilson@thc.texas.gov

Telephone: (512) 463-6046

Date: April 1, 2018

Paperwork Reduction Act Statement: This information is being collected for applications to the National Register of Historic Places to nominate properties for listing or determine eligibility for listing, to list properties, and to amend existing listings. Response to this request is required to obtain a benefit in accordance with the National Historic Preservation Act, as amended (16 U.S.C.460 et seq.).

Estimated Burden Statement: Public reporting burden for this form is estimated to average 100 hours per response including time for reviewing instructions, gathering and maintaining data, and completing and reviewing the form. Direct comments regarding this burden estimate or any aspect of this form to the Office of Planning and Performance Management, U.S. Dept. of the Interior, 1849 C. Street, NW, Washington, DC.

Roberts Clinic, Austin, Travis County, Texas

Description

The 1937 Roberts Clinic, in Austin, Travis County, Texas, is a 2-story brick Colonial Revival house with a modified rectangular plan and features a centered front gable entry wing. Originally constructed as a duplex with a medical clinic on the first floor and a residence above it, the home was later converted to a single-family dwelling. Roberts Clinic faces east on San Bernard Street, a broad road with generous setbacks, in Central East Austin. Residences around the nominated building are primarily historic 19th and 20th century homes in a variety of architectural styles: Folk Victorian, Craftsman, and Ranch. The Roberts Clinic is a symmetrical, Colonial Revival-influenced building with multi-colored brick veneer over a frame construction and multi-pane glazing in double hung windows. The hipped roof is asphalt composition shingles, and a 2-story sleeping porch, a historic addition, is on the south elevation. The focus of the façade is the arched, white stucco door surround that is topped with a small wrought iron balconet in the projecting centered gable wing. A secondary entrance, the historic entry to the top floor, is on the north elevation of this wing. Roberts Clinic interior first floor center hall plan is intact with four large rooms that originally functioned for treating patients. In 2000, homeowners converted the duplex to a single-family dwelling by removing the walled partition in the entry wing that once separated the two units. Behind the house are two other resources—a 1-story wood frame dwelling (constructed c. 1900) and a garage (c. 1940)—that are non-contributing due to alterations that adversely affected the integrity. Despite interior configuration changes, the Roberts Clinic retains excellent architectural and historic integrity.

Setting

Roberts Clinic is located at 1174 San Bernard Street, approximately one mile east of the Texas State Capitol in Austin, Travis County, Texas. The surrounding Central East Austin neighborhood is generally flat with numerous mature native trees—live oak, cedar, ash, mountain laurel, and a few sabal palm—throughout each block. San Bernard Street runs north-south for five blocks from Rosewood Ave. and terminates at Oakwood Cemetery. Once a thoroughfare for the city streetcar, the broad road is now characterized by generous setbacks and lined with sidewalks. Most resources on the street are historic-age residences constructed between 1900 and 1950, with a total age range from 1887 to 2015. A 2016 survey of East Austin determined that 33 of the 55 resources (69%) on San Bernard could be individually-eligible or a contributing resource to a district, for listing in the National Register of Historic. Eight residences, including Roberts Clinic, are designated City of Austin Historic Landmarks, and one is listed in the National Register of Historic Places.¹ Other notable properties include the Olivet Church (1959), designed by noted African American architect David Chase, and the Late Gothic Revival-style 1929 Wesley United Methodist Church (NRHP 1985 and City of Austin Historic Landmark) on blocks immediately adjacent to the nominated property.

Roberts Clinic faces east to San Bernard Street on an approximately one-half acre lot that measures 107-feet by 175-feet. Although the property is primarily flat, the front yard includes a stone planter terrace that parallels the sidewalk and visitors descend several steps to reach the front door from the road. The house is setback from San Bernard Street approximately 30 feet, and a wide concrete walkway extends from the curb to the front door then curves around to a second door on the north side of the centered gable entrance wing. The front yard is landscaped with native trees (Post Oak, Pecan, and Juniper), shrubs, hedges, and non-native trees. A gravel driveway on the south end of the property provides parking and auto access to the backyard. An approximately 8-foot-tall wood and metal wire fence divides the front and back yards on the north portion of the property.

¹ Local landmarks with street number: Costley-Goins House (1157), Spinola-Smith House (1160), Arnold House (1170), Thompson House (1171), Roberts Clinic (1174), Benjamin Lee House (1178), Scott-Hammond House (1191), Giese-Stark Store (1211). In 1985, the Arnold House (NRHP# 85002269) and Wesley United Methodist Church (NRHP# 85002281) were listed in the NRHP under the MPS *Historic Resources of East Austin* (NRHP#64000840).

Roberts Clinic, Austin, Travis County, Texas

The large backyard features two non-contributing buildings: a one-story, wood frame dwelling that faces east in the southwest corner of the lot is rental housing; and a one-story side gable garage faces south on the center north part of the yard. Each resource will be addressed in further detail below. Landscaping in the backyard is limited to two mature Ash trees and a grass lawn.

Roberts Clinic

The 1937 Roberts Clinic is a 2-story Colonial Revival-influenced building with multi-colored brick veneer over a frame construction and multi-pane glazing in double-hung windows. Originally constructed as a duplex with a medical clinic on the first floor and a residence above it, the home was later converted to a single-family dwelling. Its rectangular plan is modified with a 2-story centered gable front wing on the primary elevation, a full-height sleeping porch (a historic addition) on the south elevation, and a 2-story wing on the rear façade. The low-pitched hipped roof is covered with composition shingles and has a boxed roof-wall junction with a shallow overhang over a wide band of plain, white trim. Roberts Clinic is a wood-frame building on a raised concrete foundation and finished with a running-bond, multi-colored brick veneer that varies from dark red to cream. All the windows are historic wood-framed double-hung with 6/6 and 8/8 glazing patterns bearing brick sills and lintels. Each window has a wood-frame screen. Modern, aluminum sash windows were installed in the 2nd floor sleeping porch.

Roberts Clinic exhibits Colonial Revival-influence in its symmetrical fenestration, multi-pane windows, and accentuated front door. The exterior, however, has few architectural elaborations commonly associated with Colonial Revival-style, such as dentils (or modillions), moldings, or pediments. Instead, the featured element is a projecting full-height centered gable, a Georgian variant, and white stucco portico that highlight the Roberts Clinic entrance. The portico's style and materials are not typical for Colonial Revival architecture, but its function alludes to that style. The deep projection of its centered gable is also atypical, but this wing originally functioned as a waiting room on the ground level and contained an interior staircase to access the second-floor residence.

East (Primary) Elevation (Photo 1)

Roberts Clinic faces east to San Bernard Street. The brick on the primary façade matches in coloration to the veneer on other elevations but is of higher quality brick. A full-height centered front gable with a half-hipped roof projects from the façade plane. Its depth creates a wing for the two Roberts Clinic entrances that are on the east and north sides of it. A smooth, semi-circular white stucco entry portico with a curved underside accentuates the primary doorway on the east elevation. Two concrete steps lead to the 15-panel glazed French door, a modern replacement, and two metal lanterns hang from the stucco portico. The portico is capped with row of brick headers, a row of soldier-course brick, and an iron balconet. The window above the balconet is a 6/6 double-hung window. Neither the north or south elevations of the centered gable wing are visible from the street. The south elevation has a 6/6 window on each floor and the north elevation has a 6/6 window on the second floor with the original secondary entrance on the ground level. (Photo 2) This secondary entrance is a glazed panel door with a mail slot and thought to be original to Roberts Clinic. The east façade fenestration is symmetrical with the entrance wing flanked on both floors by 6/6 windows, followed by 8/8 windows. A narrow, brick chimney is right of center on the principle hipped roof. Also visible from this elevation is the 2-story sleeping porch that extends from the south elevation.

South Elevation (Photo 3)

The south elevation features the 2-story sleeping porch centered on the façade with a concrete patio. Originally, the south elevation had the same fenestration as the north façade. Roberts removed the center 2nd-floor 6/6 window when he added the sleeping porch. Built in 1954, the sleeping porch is a wood frame addition with a half-hipped roof, white siding, and modern, aluminum sash windows supported by two concrete piers. Prior to the 2nd-floor enclosure, both

Roberts Clinic, Austin, Travis County, Texas

levels had screen windows. Single windows also flank both sides of the sleeping porch. The first floor contains a set of double French doors flanked on both sides by two sets of windows. A concrete staircase leads from the patio to a three-panel glazed door that is on the south-facing elevation of the rear wing.

West (Rear) Elevation (Photo 4)

Fenestration on the rear elevation is asymmetrical. A narrow, 2-story wing (10' x 9') with a half-hipped roof (similar in form to the primary façade) projects left of the central bay with two small, 6/6 double-hung windows that punctuate each floor. The principal roof has a center gable with a wood-paneled gable end and a small, louvered window. The second floor has four windows: one 3/3 in the center bay and two 6/6 are to right (south) of the wing and one 6/6 is left (north) of the wing. A concrete staircase with wrought iron railing is supported by concrete piers against the rear wall.² It leads from a door on the south side of the rear wing to a short landing before descending to the ground-level patio. Underneath the 2nd floor landing is a three-paneled glazed door. Both this door and the adjacent door in the south side of the rear wing share a concrete landing and steps to the yard. Pairs of 6/6 windows are in the outer bays, denoting the former patient rooms, and the back door is flanked by a 1/1 window and a small, 6/6 window.

North Elevation (Photo 5)

The north elevation has same fenestration pattern as the south façade without the sleeping porch. In its place, there is a 6/6 double-hung window above a pair of glazed panel doors that open to a modern wooden deck.

Interior

Roberts Clinic is a 2-story single family residence that was converted from a duplex with a ground-level medical clinic and top floor residence. The impact and dates of some alterations, like the installation of air conditioning, to the historic interior are not known. The building has functioned as a single-family residence since the medical clinic closed in 1967, and the current configuration is the result of a renovation circa 2000.³ Based on oral testimony and physical evidence, it is known that upstairs kitchen was removed and the first-floor kitchen enlarged. Other rooms on both levels were enlarged by either removing or moving walls. Significantly, the entry wing was modified to unify the historically-separate clinic from the upstairs living space. Although the interior has been altered, the historic footprint is still visible and original materials—like windows, doors, hardware, wide baseboards, hex-tile and pine floors—remain intact. During the renovation, some original materials were reused in other parts of the house. The central heating system, original to the building, still exists in the approximately 8' x 7' boiler room under the center of the house that is accessed by a trap door in the hallway of the first floor.

First Floor (Figure 1)

Historically, the Roberts Clinic first floor functioned as a medical clinic, and patients entered through the front door on the east (primary) elevation to wait in the foyer. The interior stairway was previously enclosed, and the foyer ceiling was 10'-tall. A north-south hallway bisected the clinic's rectangular floor plan with entrances to four, 15' x 15' examination rooms in the northwest, northeast, southwest, southeast corners. An open kitchen was at the west end of the foyer, and a bathroom was behind it at the rear, west wall. The rear wing, with exterior access only, is thought to have originally functioned as a laundry room.

² A stamp that says "ROBERTS CLINIC 1 19 44" on the first step of the two-story concrete stairway implies it was added in 1944.

³ Between 1992 and 1997, Roberts Clinic was rented to Oxford House, Inc., a nation-wide chain of halfway houses for recovering alcoholics, and accommodated 5-12 tenants at a time.

Roberts Clinic, Austin, Travis County, Texas

The current first floor plan retains the general configuration with rooms at each corner that are bisected by the foyer (east-west) and hallway (north-south). However, only the southeast former examination room retains its original proportions. A modern kitchen was installed in the southwest room that was also enlarged by the removal of its north wall. The modification took square-footage from the original first floor kitchen and bathroom. Supporting piers show where the original walls once stood before the kitchen entry was enlarged. Ceramic tile replaced original pine hardwood floors in the new kitchen and adjacent hallway. An irregularly-shaped bathroom now occupies the space between the modern kitchen and living room. It retains the original hex-tile floor with modern fixtures, including a stand-up shower. Former examination rooms on the north end of the building became one large modern living room following the removal of hallway walls. The historic footprint of these rooms is evident in the supporting piers and in pattern of the wood flooring. Interior panel doors, baseboards, and hardwood floors throughout the first floor are original.

Second Floor (Figure 2)

The nominated building's second floor was originally living quarters for the Roberts Family who accessed the apartment from a side door in the centered gable wing. The interior stairway was walled off from the foyer, and the second-floor landing extended into the wing.⁴ Three small bedrooms occupied the south portion of the nominated building. Access to the sleeping porch likely would have been from the middle bedroom. The kitchen, dining room, and living room were in the north half of Roberts Clinic. The original floorplan had one bathroom at the west end of hallway. Another exterior door from the second-floor wing opens to concrete stairs at the rear of the building.

A partition and ceiling in the foyer that historically-separated the Roberts Clinic two floors was removed circa 2000. Modern wood stair balusters and bannister were installed on the L-shaped staircase, and its second-story landing has a smaller footprint due to the now full-height ceiling in the centered gable wing. Three small bedrooms were replaced by master bedroom and an ensuite bath, separated by a $\frac{3}{4}$ partition wall, in the south half of the nominated building. This large room was also widened, which resulted in narrower second floor hallway. The sleeping porch was carpeted and enclosed with modern, single-pane casement windows; it functions as a home office. The original bathroom, located at the end of the hallway, retains its original tile floors and cabinetry. Two bedrooms occupy the north half of the nominated building. One replaced the former living room (northeast corner) and is accessed by modern French doors from the hallway. Its ceiling is now vaulted. A panel door with a small glazed light provides access the northwest bedroom (formerly the kitchen/dining room.) Although this is not likely the original room door, it is believed to have been reused from the first floor. An arched doorway separates this rear bedroom from the small, second floor room within the rear wing. Original pine floors, baseboards, and most interior panel doors are original to Roberts Clinic.

Non-Contributing Resources

One-Story Residence, c. 1900 (Photo 8)

At the southwest corner of the lot is a one-story wood-frame dwelling constructed c. 1900 with an asphalt composition roof. The simple building is a National Folk-style, side-gabled hall-and-parlor house with a one story, cross-gabled addition in the rear. It is thought to be the original home built on the nominated property that was later moved when Roberts Clinic was built. A covered porch spans the length of its east (primary) façade. Over time, it has been substantially altered including the modern rear addition and deck. It is missing original materials like windows, doors, siding (on all except drop siding on the front elevation), and porch supports. It is considered non-contributing because alterations greatly diminished integrity of its design, materials, workmanship, feeling, and association.

⁴ There are conflicting reports about the existence of an interior doorway to the foyer staircase.

Roberts Clinic, Austin, Travis County, Texas

Garage, c. 1940 (Photo 9)

The garage is a one-room wood-frame building with a gabled roof clad in composition shingles and grooved plywood siding. Located on the rear north portion of the lot behind Roberts Clinic, the building's footprint matches a garage shown on historic fire insurance maps, and it is believed to have been constructed circa 1940. The garage is considered non-contributing because, at this time, there is no supporting information to determine whether its surviving physical characteristics existed during the property's historic period.

Integrity

The Roberts Clinic retains excellent architectural and historic integrity that communicates its significance as an early 20th century healthcare clinic and residence. It retains integrity of location at its original address in East Austin on a residential street with historic homes that reflect the cultural heritage of the former-African American neighborhood. Spatial relationships between the houses and the road – lot sizes, sidewalks, generous setbacks – are retained and demonstrate the character of this historic streetcar neighborhood. Roberts Clinic also retains integrity of design in its architectural style, form, and exterior plan. Essentially a 1930s Classical Revival duplex, the building retains its symmetrical fenestration and subtle Classical ornamentation that includes the featured center gable front wing with a white stucco portico that articulates the primary entrance. The secondary entrance that led to the upper floor residence remains and communicates the Roberts Clinic historic plan, despite later interior alterations that made the building a single-family home. Integrity of workmanship and materials are retained on the exterior and interior. Original windows, hardwood floors, doors, basement broiler, and finishes communicate the era of its construction. Although Roberts Clinic is modestly-styled, its excellent workmanship is reflected in the masonry, the handsome portico, and sturdy condition of the building. Its high integrity of setting, original design, materials, and workmanship communicates the feeling of other residences that were constructed in the same era as Roberts Clinic, even if it does not obviously convey the historic function. A WPA stamp on the front sidewalk indicates it was formerly the Roberts Clinic providing a direct association with its historic significance.

Roberts Clinic, Austin, Travis County, Texas

Statement of Significance

Roberts Clinic, opened in 1937 by Dr. Edward L. Roberts, was the first medical facility in Austin established to provide hospital rooms exclusively for the treatment and comfort of African American patients. In the Jim Crow era, African American physicians and patients faced medical discrimination; doctors were denied staff privileges at hospitals and Black patients received sub-standard medical treatment. Black-owned clinics opened throughout the South in the 1930s, giving physicians professional autonomy and allowed African Americans to receive medical care by their own doctors. As hospitals integrated in 1950s and 1960s, independent facilities like Roberts Clinic closed. After graduating from Meharry Medical College in 1931, Dr. Edwards Roberts established a private medical practice in East Austin. Six years later, he constructed Roberts Clinic, a two-story brick medical facility and private residence for the Roberts Family. The clinic provided care and treatment for preventative, acute, and chronic illnesses, minor surgeries, and labor and delivery services for the city's black community through the 1960s. It closed following Roberts' death in 1967. Roberts Clinic is nominated to the National Register of Historic Places at the local level of significance under Criterion A for Ethnic Heritage/Black and Health/Medicine for the period of significance 1937-1967. It is also nominated under Criterion C for Architecture as a type of small proprietary medical clinic, built by African American physicians in the South during the period of segregated medical practices in the United States. It is the only remaining example of this property type extant in Austin, Texas.

Austin, Texas⁵

When the City of Austin was founded in 1839, Edwin Waller laid the original 640-acre grid townsite on an area of flat land on the north banks of the Colorado River in Central Texas. This original tract was a subset of a 7,735-acre tract of land the Texas Congress acquired for the Republic of Texas' new capital, and it included land directly east of the original city boundary. The 1840 Sandusky plan, which directed the development of outlying acres, delineated large divisions sub-divided by "Outlots" in what became East Austin. The varied topography—marked by steep and gradual hills and areas of flat land—produced the odd-sized blocks and complex street networks that still characterize East Austin today. In 1839, City Cemetery (now Oakwood Cemetery) was established in Division B, three blocks north of the nominated property.

The late 19th-century saw significant development in East Austin. Following the Civil War, freedmen established communities—like Robertson Hill, Masontown, and Pleasant Hill—in the area, and European immigrants purchased tracts from larger Outlots. By the 1880s, there were at least 12 subdivisions in East Austin and "full-scale real estate promotion and homebuilding" characterized this period.⁶ Many extant historic houses in the area reflect styles that were popular during this late-19th century development. The city's electric streetcar system included a segment that connected Oakwood Cemetery south (via San Bernard Street) to E. 6th Street and then to Congress Avenue in downtown Austin. Streetcar accessibility allowed residents to reside in East Austin suburbs and commute to work downtown.

Rural African Americans moved to East Austin in the late-19th century in search of employment, and in the first decades of the 20th century the city's black population began to concentrate on the east side. Religious, and educational buildings reflected the growth of that community: Tillotson College (established in 1881), Robertson Hill School (1884), Samuel Huston College (opened 1900), Ebenezer Baptist Church (c. 1885), Mount Olive Baptist Church (1889), Wesley Methodist Episcopal Church (1882). Black-owned businesses existed in the area, but the main commercial blocks for African American Austinites was on East 6th Street, west of East Avenue.

⁵ Adapted from Hardy, Heck, Moore, Inc., *City of Austin Historic Resources Survey*, Vols I-II, October 24, 2016.

Roberts Clinic, Austin, Travis County, Texas

As Austin's black population increased from 5,822 in 1900 to 9,868 in 1930, Anglo-American and European residents moved out of East Austin.⁷ For example, residents of San Bernard Street in 1900 were German, Swedish, Irish, and Anglo, but the demographic shifted to predominately African American within two decades. The 1928 Koch & Fowler City Plan "culminated this trend" when it recommended solving the Austin's "race segregation problem" by creating an African American district in East Austin, where they noted most black Austinites already lived.⁸ City leaders achieved this "by denying basic government services to African Americans in other parts of Austin, explicitly forcing African Americans as well as Mexican Americans to move to East Austin."⁹

Between 1930 and 1945, forced segregation created a self-sufficient African American community with its own businesses, schools, churches, parks, and social institutions:

Residents of East Austin owned and rented property, frequented various churches, and enjoyed patronizing restaurants, ice cream parlors, movie theaters, and hotels. Yet they only had these opportunities within the confines of the segregated district.¹⁰

Within that period, more than 100 businesses opened in the core commercial districts that were on East 11th Street, Rosewood Avenue, and East 12th on the streetcar and bus lines.¹¹ Consolidation also increased residential development, and new homes were constructed throughout the area. Some of the houses reflected the growing wealth of the African American professional class—business owners, attorneys, physicians, pharmacists, and dentists—but East Austin public and slum housing demonstrated the over-whelming majority of black Austinites who were impoverished.

Following World War II, grassroots activism in East Austin challenged local, state, and federal policies that discriminated against African Americans. Political organizations like the National Association for the Advancement of Colored People (NAACP) were instrumental to ending systematic discrimination in federal policy, but African American Austinites had little local political sway.¹² Slum clearance and urban renewal, which city leaders justified by conditions caused by racially-inequitable municipal policies, displaced East Austinites and dis-investment occurred in that part of Austin. Integration of schools, hospitals, parks, public transportation in the 1950s-1970s improved the general welfare of the black community, but it was also led to the closure of important East Austin institutions. Post-war suburban growth in Austin in the latter half of the 20th century concentrated city investment to areas outside of the downtown core, and areas near it like East Austin suffered further economically. In the late 20th-century and early 21st-century, rapid growth in East Austin has further diminished its cultural heritage. Rising property values priced out long-time residents, and demolition for new construction has erased historic buildings once-associated with the East Austin black community.

African Americans, Healthcare, and the Medical Profession in Austin, Texas, 1900-1964

The Roberts Clinic, built in 1937 by Dr. Edward L. Roberts in Austin, Texas, was established during the era of segregated healthcare that existed nationwide until the mid-1960s. Legal segregation and disenfranchisement in the Jim Crow South resulted in substandard patient care and suppressed the professionalization of African American

physicians. Most African Americans who received medical care between 1900 and 1964 were treated by white doctors because there were disproportionately fewer black doctors to serve the community. They underwent surgery at public hospitals but were relegated to inferior segregated wards for post-surgical care. Legal and extralegal discrimination also suppressed the professionalization of African American doctors because it dictated “that African American physicians in the South always remember that they were black first and physicians second.”¹³ They faced numerous barriers: to qualifying pre-med education; the economic burden of medical school; few post-graduate opportunities; exclusion from medical societies; competition with white doctors for black patients; and the denial of hospital staff privileges. Dr. Roberts, his patients, and colleagues all experienced the same racial disparities in Austin as other African Americans faced in healthcare and as medical practitioners elsewhere in the Jim Crow South.

Physicians were among the first Anglo-Americans to settle Texas in 1821, and they participated in every formative event in Texas history. They fought in the Texas Revolution, signed the Texas Declaration of Independence, held powerful political positions under the Republic of Texas flag, and later, the state flag. In 1853, Dr. Ashbel Smith and 35 other physicians chartered the Texas Medical Association, one of the oldest state medical societies in the country. One hundred and two years later, the TMA admitted its first black doctors to the prestigious organization. Until the 1950s, African American physicians were respected members of their community but were second-class citizens in the Texas medical community.

In 1882, Quinton Belvedere Neal, M.D. was the first African American to open a medical practice in Texas. After establishing an office in Austin in 1882, he was joined by Dr. E.W. Abner and Dr. John F. McKinley. Other early Austin practitioners included Drs. John Henry Stevens, and T.A. Webster. These doctors had downtown offices, likely on East 6th Street, that were “equipped and comfortable for the accommodation of those needing medical attention.”¹⁴ Barred from treating white patients, “those” referred to the approximately 7,000 African Americans enumerated in Austin in 1900. In 1905, Abner’s practice was regarded as quite modern with three departments: reception room, private office, and examination room; he was the only black physician to own an X-ray machine.¹⁵

Rising professional standards in the practice of medicine stunted graduation rates for black medical students in the early 20th century. The 1910 Flexnor Report, produced by the American Medical Association for the Carnegie Foundation, surveyed American medical colleges in order “to improve the quality of physicians by establishing higher standards for medical education and eliminating weak medical schools.”¹⁶ It found that most African American medical schools lacked the funds and equipment to meet the new standards, and subsequently most of these institutions closed. Meharry Medical College and Howard University were the only medical schools that scored well. Between 1910 and 1940, these medical universities produced 90% of all graduates with an annual average of 100 new physicians. With a deficit of African American physicians, most black patients saw white doctors and went to segregated wards of city hospitals. In 1914, there were 104 trained African American doctors working in 23 Texas counties, and only two were working in Austin in the 1920-30s.¹⁷

Until the 1930s, black Austinites who needed urgent, surgical, or extended care had few options other than the city’s three hospitals: City Hospital (Brackenridge), St. David’s Hospital, and Seton. Hospitals in the Jim Crow South did not refuse black patients, but there were rarely beds open to African Americans. In 1915, the City of Austin replaced the aging City Hospital with a four-story, modern brick edifice to better care for its citizenry. The old limestone hospital,

built in 1884, was cracked on its exterior, had plaster falling off the ceilings, and was a “veritable fire trap,” but nevertheless was retained behind the new structure for tuberculous patients “and others that is considered best to keep segregated.”¹⁸ It was a permanent solution to a controversy four years prior when the City Hospital’s managing physician allowed a black patient to be treated on the same floor as whites.¹⁹ In 1928, the city razed the old hospital and treatment of African American and Mexican-American patients was moved to the basement of a new hospital wing. Despite additions that increased the size of City Hospital (renamed Brackenridge in 1929) through 1941, African Americans patients remained relegated to the basement.

Segregated treatment periodically had fatal consequences. In 1948, Dr. Karl E. Downs, president of Samuel Huston College, was admitted to Brackenridge Hospital at the recommendation of his (black) physician to see a urologist for urgent surgery. Following the operation, “they had to roll him from the main hospital across an open corridor ramp to the area where they were keeping Negroes and Mexicans...the old tuberculosis [ward].” The exposure caused complications that were not realized until he was in the segregated ward, which was not equipped with emergency equipment necessary to save Down’s life.²⁰

Race limited the types of medicine black physicians could practice, which ultimately challenged their ability to keep and maintain patients. Meharry Medical College and Howard University prioritized sanitation and hygienic medical curriculum over scientific medicine and research.²¹ White philanthropic organizations that funded Meharry and Howard—like the Carnegie Foundation and Rockefeller’s General Education Board—strongly shaped this limited educational scope. Subsequently, more than 90% black medical students became general practitioners, a type of physician who treated a broad range of acute and chronic illnesses and provided preventative care for people of all ages.

Barriers to post-graduate educational opportunities, imperative in the medical profession, were also based on race and segregation. In 1930, there were no residencies available to black physicians to learn a specialty, like internal medicine, urology, or obstetrics.²² Even if one was able to obtain a specialty, black physicians were barred from staff rights at hospitals. Therefore, “patients were dependent on white doctors for advanced services that black physicians could not provide.”²³ One Austin doctor remembered:

The facilities when I came here were limited. Negro doctors could not practice, were not allowed to be on the stair of Brackenridge Hospital. They were not allowed to be members of the local medical society. They were not allowed to be members of the national medical society. Now, if you’re going to be on the stair of the hospital, you gotta be a member of the medical society. To get in the state medical society, you had to be a member of the local [society]. So then if you weren’t permitted in those organizations, you weren’t allowed to practice [at the hospital]...I would take my patients to the hospital and leave them; and the white doctor or whoever else was on the staff would treat them.²⁴

Roberts Clinic, Austin, Travis County, Texas

In *Black Physicians in the Jim Crow South*, Historian Thomas J. Ward Jr., argued that African Americans sought white physicians because they had modern equipment and could provide total-service healthcare that included hospital privileges. “White supremacy was so ingrained,” Ward wrote, “that many African Americans refused to believe that any black doctor—no matter how well educated, well trained, or talented—could ever be as good as a white physician.”²⁵ Dr. Beadie Conner, an Austin physician, supported Ward’s claim and stressed the majority of his patients were impoverished while people of means saw white doctors.²⁶ Those who could afford the care of a white physician, however, were subjected to second-class treatment. These offices discriminated through separate waiting rooms, alternate appointment hours from black patients, and prioritizing white patients over non-white patients.²⁷

The 1920s and 1930s were a transitional period in how physicians organized their medical practices. In previous decades, physicians tended to practice individually or partner with one or more medical practitioners in a small office. Although that tradition continued, particularly in the African American community, white physicians, dentists, and other medical technicians consolidated their businesses in Medical Arts buildings. Tenants for this period at Norwood Tower in Austin included “medical professionals [who] were served by other tenants including the Travis County Medical Society and Library, the Renfro Drugstore, and multiple X-ray laboratories.”²⁸ These “one stop shop” buildings created networks of mutually-beneficial referrals wherein white general practitioners referred patients to X-ray technicians and specialist under one roof, and vice-versa.

Excluded from medical arts buildings and hospitals, some African American physicians established proprietary clinics and hospitals. By the 1930s, there were more than 200 such institutions across the nation, and a few were counted in Texas.²⁹ Clinics ranged from “makeshift” rooms in a physician’s house to newly constructed buildings with modern technology. The clinics provided a multitude of services, like: tonsilleotomies, labor and delivery, setting broken bones, x-rays, and other minor surgeries. Importantly, proprietary medical facilities provided black doctors professional autonomy and patients were spared the indignity of segregation. The Dickey Clinic (1936) in Taylor, Williamson County was the first such clinic in Central Texas until Roberts Clinic was established the following year. In 1940, the Catholic Holy Cross Church helped establish Holy Cross Church, the first hospital built for the exclusive care of black patients. It employed African American doctors, like Dr. Beadie Conner, and was run by Sister Mary Celine Heitzman, M.D. It operated until 1989.³⁰

After World War II, one Austin doctor noted that “things were changing,” in the way of Civil Rights for healthcare. Dr. Beadie Conner was instrumental in the fighting for staff privileges at Brackenridge Hospital in the 1940s and 1950s. In a 1984 interview, he attributed changing social attitudes in a new generation of young white doctors who set up practices in Austin following their war service. Conner’s persistence, however, was a force that eventually helped open the hospital doors to African American physicians to be active hospital staff in 1954. Within the context of the Civil Rights Movement, hospital integration in Austin preceded the federal legislation that prohibited segregation. In the early 1960s, two landmark court cases-- *Simkins v. Moses H. Cone Memorial Hospital* and *Eaton et al. v. James Walker Memorial Hospital*—prohibited any publicly-funded hospital from racial discriminating for staff or patients. Segregation did not suddenly end in Austin following the 1964 Civil Rights Act, but integration slowly un-did or evolved institutions, like Roberts Clinic, which were established within the context of the Jim Crow Era.

Edward Lowell Roberts, M.D. (1904-1967)

In 1937, Dr. Edward L. Roberts was the first physician in Austin to provide hospital rooms exclusively for the treatment and comfort of African American patients. Despite this accomplishment, there are few records that provide direct insight into his personal life and professional career. However, medical history scholarship, contextual research, and oral accounts of local Black doctors show that Roberts experienced the same racial disparities in Austin as other African Americans medical practitioners faced elsewhere in the Jim Crow South. Ultimately, Roberts was a well-respected physician whose practice improved the quality of life of the community whom he served for more than thirty years.

Edward Lowell Roberts was born to James Isom and Elizabeth “Lizzie” (Johnson) Roberts in Floresville, Wilson County, Texas on July 11, 1904.³¹ Roberts came from modest means; Isom was a general farm laborer, and Lizzie was a domestic worker. As a child, Roberts helped with farm work, and received primary education at the segregated Floresville school. By 1920, the family moved to San Antonio and his parents divorced. Lizzie re-married to Madelen Goins, a furniture salesman, and Roberts lived with them when he graduated Douglass High School.³²

Roberts was likely drawn to the medical profession for the same reasons other young men were: southern Black communities regarded physicians as wealthy, educated, and prestigious.³³ Physicians were in an elite African American social class with ministers, attorneys, and teachers. Medical school admission requirements and cost, however, prevented many aspiring doctors from pursuing the profession. These burdens were reflected in low graduation rates for black physicians between 1920 and 1940, which averaged 100 annually.³⁴ Roberts overcame those hurdles when he satisfied admission prerequisites by completing a two-year college degree at Wilberforce University in Ohio before he enrolled at Meharry Medical College, one of four accredited medical programs for African Americans in the late 1920s.

Without financial assistance, Roberts worked his way through medical school as a Pullman porter to pay his tuition and living expenses. He met Mary Ridley (1902-1991) in 1930 when the Pullman train on which he worked stopped in Chicago. Mary was a physical education teacher in Bluefield, West Virginia but attended summer college courses in Chicago. She later recalled, “It was fun to meet the trains as they breezed into the railroad stations [and] often that was the main Sunday afternoon attraction.” They married during his senior year, but she remained in Bluefield until Roberts finished his medical education.³⁵

In 1931, Roberts graduated with a B.S. in Medicine and obtained his physician’s license physician in Tennessee. **(Figure 3)** He won a coveted year-long internship, a post-graduate requirement established by the American Medical Association, at John A. Andrews Hospital in Tuskegee, Alabama. Although internships were a pre-requisite to starting a private practice, segregation limited training opportunities for black medical school graduates because they were not allowed to treat white patients. Roberts’ internship at Andrews Hospital was one of 94 available internships at 13

³¹ Some primary documents listed Roberts’ birth year as 1901. Year: 1910; Census Place: Floresville, Wilson, Texas; Roll: T624_1598; Page: 2B; Enumeration District: 0157; FHL microfilm: 1375611. African American hospitals nationwide offered that year for graduates of all four Black medical colleges.³⁶ Many of his Meharry contemporaries were not awarded training.

When his internship concluded, Roberts and Mary moved to Texas to establish Roberts' private medical practice. The Texas State Board of Medical Examiners awarded Roberts a license on March 22, 1932. It was granted through reciprocity, which meant the Texas Medical Board and the Tennessee Medical Board mutually agreed to license doctors from their respective states without examination. Roberts was one of four physicians listed on the Reciprocity Registry as "Colored."³⁷ Although he was welcomed home in San Antonio, Roberts chose to move to the state capital. Historian Thomas J. Ward outlined the difficulties beset by new physicians who established practices in the 1930s South, some (or all) of which Roberts' may have encountered in Austin:

Most black physicians—like many of their white counterparts—finished medical school with a host of debts and had little money with which to start a practice. Few southern banks were willing to loan money to a black physician, who were seen...as a bad credit risk...Many found it difficult to lease office space...as white landlords refused to rent to "nigger doctors." New physicians also often dealt with opposition from the town's established physicians—both black and white—who saw any new practitioner as competition for the small number of paying patients.³⁸

In 1932, there were two other African American physicians who practiced in Austin, Drs. Charles H. Christian (1893-1938) and Charles R. Yerwood (1890-1940). Both established practitioners worked out of offices on E. 6th Street, a historically-black commercial district in downtown that was approximately a mile from the black residential district in East Austin. Roberts, however, worked from a small rental house on Navasota Street, one block from the future Roberts Clinic.³⁹ The location likely gave Roberts some advantage over Dr. Christian and Dr. Yerwood as his office was closer to their target clientele. Roberts' services were immediately needed, as noted in the "Austin News Section" of the San Antonio Register in January 1933, "The flu may be an unwelcome visitor, but it has gone a long way toward introducing Dr. E.L. Roberts to Austin society."

Roberts, like most Black physicians in the United States working at the time, was a general practitioner. He treated patients of all ages for acute and chronic illnesses. Importantly, Roberts provided preventative care for the community, and his work addressed the underlying causes of illness and death among African Americans. Until he opened Roberts Clinic in 1937, if his patients needed a specialist or surgery Roberts referred them to a white doctor. Black physicians were not allowed to treat patients at any of Austin's hospitals.

Roberts developed professional and personal friendship with area physicians, especially Dr. James L. Dickey in Taylor who was also a graduate from Meharry. In 1936, Dickey opened a 3-bed proprietary clinic in Taylor that was "touted as a modern hospital" with a lab, x-ray equipment, operating room, and delivery room, and he employed two full-time nurses. It was the only hospital for people of color in a 5-county area.⁴⁰ The following year, Roberts Clinic opened in

³⁸ Ward, 106.

³⁹ According to the 1933 Austin City Directory, the Roberts lived at 1174 Navasota Street in a modest one-story residence (demolished) one block from the nominated property. When the Roberts Clinic opened in 1937, the City Directory listed him living at 1151 ½ San Bernard. It is thought they lived there temporarily while Roberts Clinic was under construction.

Roberts Clinic, Austin, Travis County, Texas

Austin. Like the Dickey Clinic, Roberts equipped his facilities with modern medical technology, like an x-ray and a cardiograph for recording heart muscle activity. Two trained nurses were on staff, and Roberts Clinic could accommodate nine patients.⁴¹ Corrine (Williams) Harris, a nurse at Roberts Clinic from 1950-1956, recalled the facilities had four patient beds, an office, kitchen, and surgery room.⁴²

The expanded facility, as opposed to his first office, allowed Dr. Roberts to increase his patient load and services. In addition to providing treatment for illnesses, giving vaccinations, and health education, Roberts Clinic was equipped for minor surgeries and labor and delivery. As one of the nurses, Harris assisted Dr. Roberts drawing blood, providing vaccinations, and delivering babies. Although other Austin African American physicians sought staff privileges to local hospitals, Harris recalled that the surgical facilities at Roberts Clinic were satisfactory for Dr. Roberts and he, to her knowledge, did not pursue that.⁴³ The clinic provided comfortable and sanitary care for patients recovering from illness and procedures with registered nurses to aid them. Roberts marketed that service on his car that said, "Dr. E.L. Roberts, 1174 San Bernard Street, A Home Away from Home."⁴⁴ More importantly, the clinic gave black Austinites to a medical office where they could receive dignified treatment from a black physician.

Dr. Roberts was regarded as a kind doctor whose bedside manner established trust with all his patients.⁴⁵ Dr. Beadie E. Conner, another Austin physician, attributed that quality to their training at Meharry: "We didn't have all the fancy professors and research. We know bedside manner, we knew how to contact patients, we were dedicated to finding out what was wrong with the patients."⁴⁶ Although Roberts was not a community leader, like Dr. Dickey in Taylor or Drs. Yerwood and Conner in Austin, he was respected for his charitable service. Through the Welfare and Benevolent Association of Texas, Roberts Clinic provided free hospitalization to patients who could not otherwise afford it.⁴⁷ He provided low cost hospitalization through, at least, 1951.⁴⁸

Roberts nor Conner discriminated against their clientele and tended to any race of patient who visited their office. Ward attributed this as necessary to maintaining a gainful practice, writing:

At the end of World War II, the average southern black physician in private practice...saw 155 patients a week and spent seven hours a day in his office, with additional hours given to hospital visits and house calls. Although his patient load might be greater than that of his white colleagues, his income was likely to be 25 to 30 percent lower, because the overwhelming majority of his patients were poor.⁴⁹

[Hereafter, referred to as "Harris, Franklin Interview, X"]

⁴⁵ Harris, March 14, 2019.

⁴⁶ According to Harris there was, apparently, animosity between Roberts and Dr. Beadie E. Conner (1902-1994) whose oral testimony from 1984, ironically, helped develop the local context for this nomination. Although Conner was very forthcoming in that interview, describing numerous other doctors practicing contemporaneously in Austin, he never mentioned Dr. Roberts. Conner, a native of Cameron, Milam County, graduated from Meharry shortly after Roberts, and moved to Austin to take over Dr. Christian's practice in 1937. Dr. B.E. Conner, interviewed by Anthony M. Orum, May 18, 1984. Power, Money & the People: The Making of Modern Austin Research Materials (AR.1991.64). Austin History Center, Austin Public Library, Texas.

⁴⁹ Ward, 120.

Roberts Clinic, Austin, Travis County, Texas

Conner's testimony supports Ward's assessment and suggests other black doctors in Austin experienced the same. "I treated anybody," Conner said, later noting: "I got \$5 for a night call. \$3 for a day call. I did that for years. I had \$5, \$3, and \$5 office visits...I wasn't all that humanitarian, they didn't want to pay anymore."⁵⁰ Roberts, like Conner, made house calls, and by 1951 had approximately 250 patients.⁵¹

Maintaining a gainful practice also meant that Drs. Roberts and Conner provided some services "under the table." For example, Austin physicians administered penicillin to prevent and treat venereal diseases in enlisted men during World War II, but also provided the antibiotic for the same infections in citizens. Conner, for example, alluded to administering penicillin to prostitutes before they started work on Thursday and Friday nights.⁵² It was also not uncommon for a white person to visit a black physician for the same treatment to avoid any potential embarrassment they might face at their own doctor's office.

Illegal procedures, like abortions, were quietly performed by physicians of all races, including Dr. Roberts. In April 1944, Roberts was charged with murder in connection to the death of 18-year-old Carrie Louvenia Blackburn. Blackburn, a student at Sam Houston College, allegedly received an abortion from Dr. Roberts on April 12. Following the procedure, she was checked in to Holy Cross Hospital where she died of unknown complications. Roberts was jailed and prosecuted by the State of Texas for, what the coroner ruled as, homicide. The capital case, heard by the 53rd District Judge J. Harris Gardner, was postponed in September, and no records were found that documented its conclusion; Roberts continued to practice medicine.

Professional associations were, and remain, vital to the development and on-going education of medical practitioners. Excluded from membership to Texas Medical Association and the Travis County Medical Society, however, black physicians started the Lone Star State Medical, Dental, and Pharmaceutical Association in the late 19th century. The organization held annual meetings for physicians where colleagues discussed innovations in the medical practice and issues on public-health. Roberts was associated with the organization throughout his career but was particularly active in the 1930s. In 1938, the association's 52nd annual gathering included a surgical demonstration at Roberts Clinic. Roberts participated in other surgical clinics with his friend and colleague, Dr. Dickey. Harris, his former nurse, recalled that both men hosted demonstrations and talks at their respective clinics in the 1950s.⁵³

Roberts also aided in the professional development of those who worked for him. In 1950, Corrinne Harris (nee Williams) was 20 years old when she visited the Roberts Clinic as a patient. Following her visit, Roberts asked her if she was interested in a job. Harris took it, even though she was inexperienced, because "he talked me into it," but Dr. Roberts also helped her enroll in nursing courses.⁵⁴ Harris made a career in the medical field and attributed her success to that first job at Roberts Clinic: "It had really lifted me up...because I have gotten jobs that I wouldn't have gotten if I didn't take these courses, you know."⁵⁵

The Roberts Family enjoyed a comfortable lifestyle in East Austin. The Roberts Clinic was, seemingly, a lucrative practice, they had a rental property in the backyard, and Mary worked part-time at Tillotson College (and later at the Austin State Hospital). Edward and Mary had one child, Marion, who was born on November 5, 1940. When Austin public schools integrated in the 1950s, Marion was one of a few students who transferred from East Austin's Anderson High School to Austin High School. Marion excelled in school and later became an attorney and social worker in New

Roberts Clinic, Austin, Travis County, Texas

York. The family were members of the Greater Mt. Zion Baptist Church, and had a country home outside of Austin.⁵⁶ Roberts was affiliated with Lyons Junior Lodge, Texas Southwest Medical Association, Kappa Alpha Psi Austin Alumni Chapter, and the American Woodmen fraternal organization.

In 1959, Roberts made headlines again when he shot a woman, Jewel Johnson, in the abdomen. They argued over a watch he lost in a dice game. Roberts, who turned himself in, was intoxicated and argued in court that he only intended to scare Johnson, who recovered, into returning the missing timepiece. An all- white jury found Roberts guilty of aggravated assault, and he was sentenced to a year in jail and a \$1,000 fine. Following an unsuccessful appeal, Roberts served part of his jail sentence but was granted reduced time by the Board of Pardons and Paroles. The incident is not demonstrative of his professional career, but it was a public indictment of Roberts' private proclivities.⁵⁷ It also is illustrative of Ward's assessment of black physicians from this era:

Throughout the Jim Crow era physicians were constantly stuck in the crucible of class and race. They could never escape the fact that there were African Americans who had been able to rise up and become doctors, not physicians who just happened to be black. As a result, they were expected to be not only good medical practitioners but also race leaders and role models.⁵⁸

Upon release from prison in 1963, it is presumed that Roberts returned to his medical practice. There are no records that show his license was revoked because of the incident. Furthermore, the Austin City Directory listed Roberts Clinic and Dr. Roberts in editions throughout the 1960s.

On June 7, 1967, Edward Lowell Roberts died from a heart attack at 62 years old.⁵⁹ Mary closed the clinic shortly thereafter. Harris, Roberts' former nurse, recalled that many attended his funeral at Mt. Zion Church, which she attributed to his upstanding character.⁶⁰ Roberts also played a significant role in advancing the welfare of Austin's African American community in mid-20th century. Before the Civil Rights Act, legal and social segregation limited African Americans' access to quality medical care and precluded black physicians from treating their patients at hospitals. The constraints of Jim Crow led to the development of separate medical facilities where African American physicians could practice autonomously, and black patients were not subjected to second-class medical care. Dr. Roberts established Roberts Clinic, the first black-owned and operated clinic and surgical facility in Austin, in 1937 and provided preventative, emergency, labor and delivery, and post-natal care to hundreds of Austinites over the course of his career. Proprietary clinics like the nominated property closed as area hospitals integrated in the mid-1950s and following the passage of the 1964 Civil Rights Act, and Roberts Clinic is representative a brief era before integration when African American physicians demonstrated professional independence through the establishment of black-owned and black-operated medical facilities.

Roberts Clinic, Austin, Travis County, Texas

Roberts Clinic

On August 27, 1937, Dr. Edward L. Roberts opened Roberts Clinic, the city's first black-owned medical and surgical clinic, at 1174 San Bernard Street. The two-story brick building replaced a frame residence that had been on the property as early as 1900. The 1900 Sanborn Fire Insurance Company map is the first document to show improvements to the nominated boundary. Joseph Theobald, a German immigrant who worked as a teamster, owned the parcel and is likely responsible for the construction of a modified L-shaped wood frame residence with a shingle roof and full-width porch at, what became, 1174 San Bernard Street.⁶¹ His property had several outbuildings, including a two-story stable. The next occupants were Alfred and Mary (Theobald) Babel, who inherited the house from her parents in 1921. Edward and Mary Roberts purchased the nominated property from the Babel's on August 14, 1936 for \$2,400. They financed \$1,900 through the Harrison-Wilson Company, a real estate business that also provided insurance, loan, and rental property management services in all sections of Austin.⁶²

The city-issued building permit was already approved when signed Roberts signed the paperwork completing the purchase of 1174 San Bernard Street. He hired John Randolph Bingham (1891-1944), a local contractor, to build a "two-story brick veneer residence and doctor's office," that was underway the following summer.⁶³ It is probable that Bingham moved the Theobald/Babel House to the rear of the property, and Roberts retained it for rental income. The Austin City Directory listed tenants living in the wood frame house (1174 ½) from 1939 through 1969 when Mary Roberts sold the property.⁶⁴ Over time, the frame house underwent renovations that changed its exterior materials—roof, siding, and windows—and an addition was built at the rear sometime before 1995. The wood frame garage was built by 1951, and there is no information that documents its original appearance.

Bingham likely constructed Roberts Clinic based on pattern book design for residential duplexes. Built at the cost of \$6,785, the two-story red and tan brick veneer building resembled a residence on its exterior, which fit with the character of the street, but the interior was altered to accommodate a modern medical clinic on the first floor and private residence upstairs. Although Roberts Clinic simply articulates the characteristics of 1930s Colonial Revival, its design nevertheless stood out within the setting. In 1937, there were few brick homes on San Bernard Street and none were Colonial Revival-style, despite its ubiquitous popularity for residential architecture. The centered front gable, an uncommon Georgian-style feature according to Virginia McAlister, functioned as a double-entry with an attenuated door surround to the clinic and a side door to Roberts' second-floor home.⁶⁵ The gable wing also provided ample interior space for a stairway and public waiting area. Roberts Clinic's stately, rectangular box form with symmetrical fenestration organized the first-floor interior into equal sections. Cross-axial corridors provided access to four rooms at the building's corners: two patient rooms, a surgery room, and an office. The cost to build Roberts Clinic (approximately \$120,000 in 2019 dollars) and the lack of exterior ornamentation suggests that its owner chose to invest more on interior modern medical amenities.

⁶¹ The 1900 Sanborn map identifies the property as 1012 San Bernard. Contextual clues and the 1900 Census show that the number should have read, "1312 San Bernard," which is the original address for the nominated property. By 1910, the same property (Lot 3, Block 6 Outlot No. 56) is listed as 1174 San Bernard. Roberts Clinic, Austin, Travis County, Texas

Contemporary clinics, likely based on the established home-office model, provided the basic framework on which Roberts Clinic was designed. African American and white physicians established home-medical practices in the late 19th and early 20th century after traditionally attending to patients via house calls. Although many continued the house-call tradition, a trend towards stationary medical practices increased around 1900. Home medical offices, one historian argues, varied in the conscious separation of residential and professional interior realms, but exteriors often masked the interior medical function.⁶⁶ In 1920s-30s, multi-disciplined medical arts buildings replaced the home-office for many physicians. During this same period, African American doctors, excluded from medical arts towers and hospitals, evolved the home-office to function as a small hospital. New buildings were constructed, and old buildings were retrofitted to with offices, surgery rooms, and patient rooms. Proprietary hospitals and clinics of 1930s tended to resemble residences, as home-offices had traditionally, but later clinics looked more commercial. Central Texas examples included the Roberts Clinic and the Dickey Clinic (demolished), which were both new constructions in the 1930s and were architecturally-residential in character. Dr. Beadie Conner's Austin clinic (demolished), established in the 1940s, was a simple box commercial-style building. As the medical community integrated in the 1950s, most small proprietary clinics closed when physicians and patients were freely admitted into community hospitals. The Roberts Clinic is the only extant building type in Austin that represents African American proprietary clinics constructed in the 1930s to exclusively care for black patients.

Roberts Clinic operated as a medical clinic from its construction in 1937 to 1967, and thereafter only functioned as residence. Mary Roberts vacated the building in 1968, following her husband's death a year prior, and sold Roberts Clinic in 1970. For 20 years, it was the home of the Lofton Family. In 1990, Michael Lofton inherited the home from his parents, Dave and Dorothy, and he lived there briefly before renting Roberts Clinic to Oxford House that provided temporary housing for recovering addicts. Michael Casias purchased Roberts Clinic in 1996, and under his ownership the interior of the house was renovated to its current configuration. It has been under its current ownership since 2007.

Conclusion

Roberts Clinic, opened in 1937 by Dr. Edward L. Roberts, was the first medical facility in Austin established to provide hospital rooms exclusively for the treatment and comfort of African American patients. In the Jim Crow era, African American physicians and patients faced medical discrimination, and some physicians established black-owned proprietary clinics in response. These clinics, which proliferated from the 1930s to the 1950s provided African American physicians professional autonomy and allowed black patients to receive medical care by their own doctors. As hospitals integrated in 1950s and 1960s, independent facilities like Roberts Clinic closed.

Dr. Edwards Roberts established a private medical practice in East Austin in 1931. Six years later, he constructed Roberts Clinic, a two-story brick medical facility and private residence for the Roberts Family. The clinic provided care and treatment for preventative, acute, and chronic illnesses, minor surgeries, and labor and delivery services for the city's black community through the 1960s. It closed following Roberts death in 1967.

Roberts Clinic is nominated to the National Register of Historic Places at the local level of significance under Criterion A for Ethnic Heritage/Black and Health/Medicine for the period of significance 1937-1967. It is also nominated under Criterion C for Architecture as a type of small proprietary medical clinic, built by African American physicians in the South during the period of segregated medical practices in the United States. It is the only remaining example of this property type extant in Austin, Texas.
